Vision

I am a Lecturer in Traffic and Urban Analytics at the Department of Civil and Environmental Engineering, University of Auckland. I have been contributing to the development and delivery of large research projects, such as an ERC Horizon 2020 in the UK (https://dust.leeds.ac.uk/), and the Premier Innovation Initiative in Australia (http://adait.io/inno-pii.html). My research focuses on the use of data analytics and computer simulation techniques to solve urban complex problems. In Data Analytics, I adapt and develop machine learning methods to analyse Big data of individuals, such as Smart Card, mobile phone or social network data. In Computer Simulation, I am specialised in the development of data-driven Agent-based models, a cutting-edge simulation technique of heterogeneous agents interacting with each other, to explain complex urban systems.
